

I love XM radio and want it to continue to grow without bounds. I don't understand how the NAB can even entertain the thought of trying to limit XM Radio. Its a subscription based service not a publicly broadcasted so what's their concern? I know they are losing their strangle hold on Americas radio. This looks like a campaign contribution will come from some public radio people to supporters of this initiative. I am adamantly against such legislation and think this is yet another way our tax dollars are wasted. Seems every time technology starts to beat up the competitions a senator gets bribed I mean a contribution to support slowing it down. Spend time on Immigration or securing our borders and economy not where traffic and weather announcements can be heard I think that is absurd.
